

# Collapsible Accordions in Pendo Guides

Last Updated: April 5, 2023

**Note: This custom code is offered with no support from Pendo Customer Support.**

This documentation will provide a code snippet that, when pasted into a custom code block within Pendo guides, will collapse or expand a set of custom HTML/CSS content within a defined accordion. This snippet utilizes custom code block functionality instead of native Pendo Guide building blocks:

## Setup

To install this functionality, simply add a new custom code block module to your guide step, and paste the HTML, CSS, and JS into the respective tabs of your code block based on the files listed [here](#) with the same name (ie, accordions.html into the HTML tab, accordions.css into the CSS tab, etc).

## Customizations

As shown in the example code, these accordions can support any HTML/CSS content that is placed within them.

Both standard and inline CSS are supported within any elements in the accordion space. HTML elements like text, images, gifs, videos (via iframe embed links), buttons, and list elements are supported. More complex HTML elements like checkboxes, radio buttons, and others are also possible with intermediate HTML/CSS/JS knowledge.
