# Circle–Line Tooltip Pointer

Last updated: November 15, 2022

Code Purpose & Description

This documentation will provide a code snippet that, when pasted into a custom code block within Pendo guides, will change the tooltip caret to be a simple line with a circle at the end. The styles of this circle and line can be customized within the Pendo designer. This solution supports all four directions of guide positioning, and functions with the "auto" position tooltip option.

DISCLAIMER
Though these code snippets are thoroughly documented, they are not supported by Pendo Customer Support.
Additionally, these snippets will require the 'Custom Code' guide block. If this is not enabled for your subscription, then these will not be applicable for you.

Setup

CSS

Within a tooltip guide, add a custom code block to your guide step.

In the CSS tab of your code block, simply copy and paste [this code](#).

You should not need to create or write any new code for this to work.

JavaScript

Within that same tooltip guide with a custom code block, navigate to the JS tab.

Simply copy and paste [this code](#) into that tab.

You should not need to create or write any new code for this to work.

Customization Options
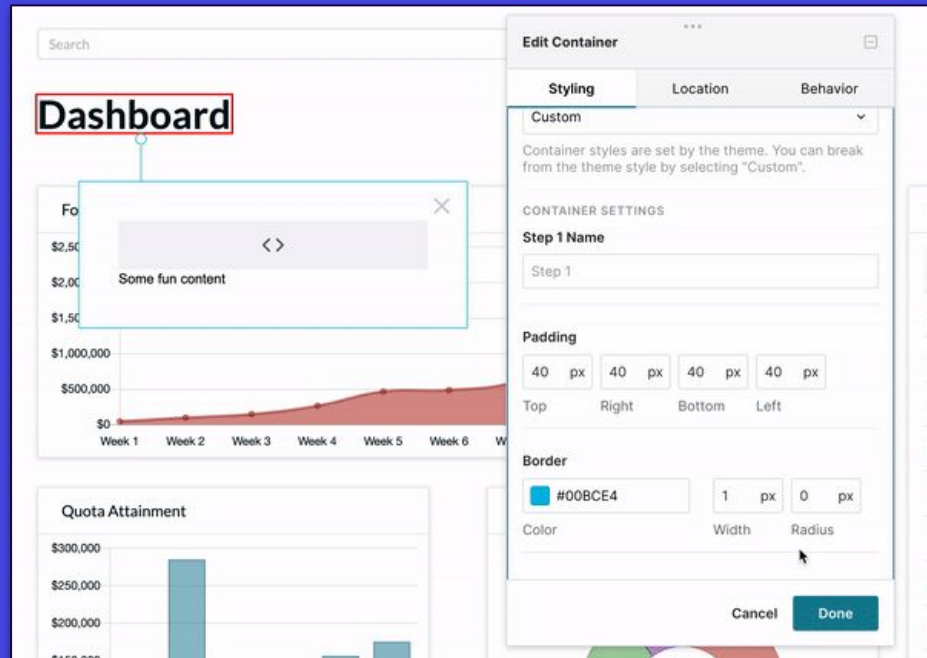

Changing the Border Color

The border of the guide container itself will always match the color of the circle line pointer, as modified within the Pendo Designer. Simply change the guide's border color to change the tooltip color as well.

Changing the Line Width

The width of the circle and line will always match the width of the Pendo guide container, as modified within the Pendo Designer. Simply change the guide's border width to change the tooltip width as well*
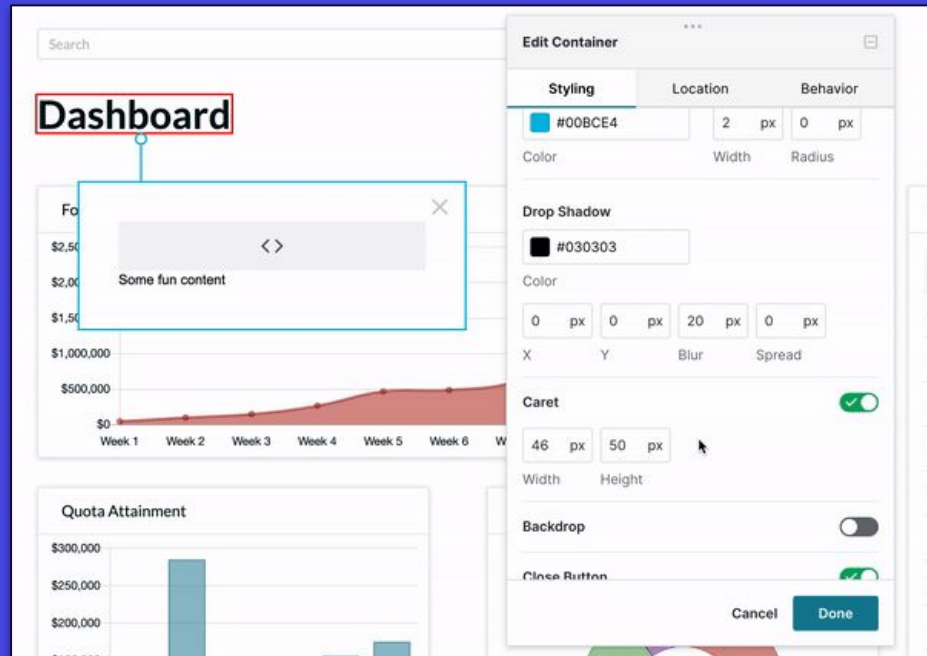

Note that making the width greater than 5 pixels may result in clipping of the circle svg image.
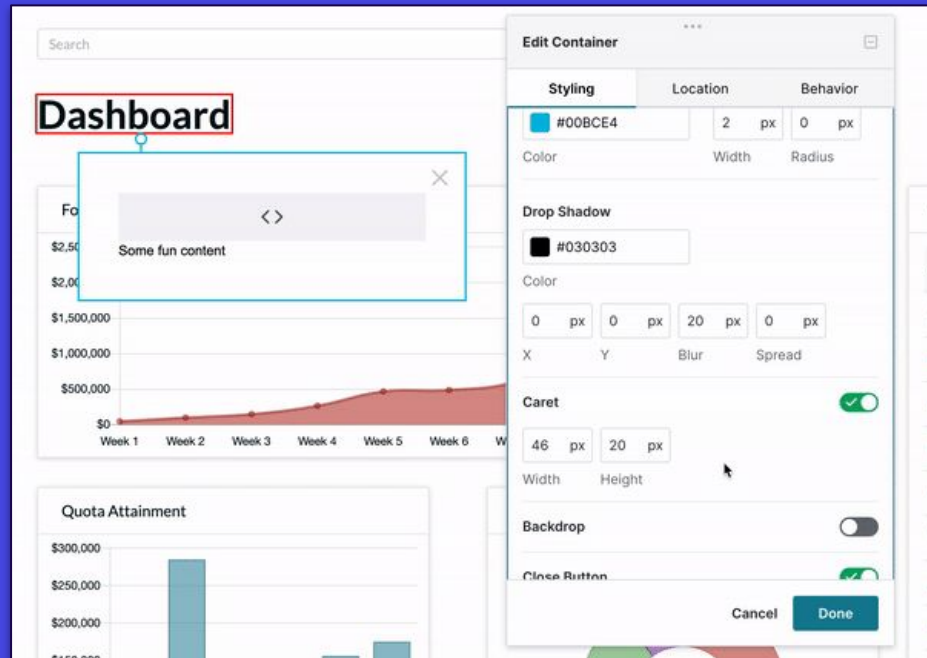

Changing the Line Height

The distance between the circle and the guide container itself can be changed simply by changing the tooltip caret **height** within the Pendo Designer.

The line will extend as far (or as short) as is available on the screen real estate (up to a max of 10,000 pixels)

Changing the Container Positioning

The left-right positioning (or up-down positioning for guides that have the caret pointing horizontally) of the guide container can be changed by modifying the tooltip caret **width** within the Pendo Designer:

Changing the Tooltip Cardinality

The cardinality of the tooltip is easily changed in the same way that a standard tooltip guide can be deployed. Simply change the
