# Capturing Current URL in Pendo Guide Polls

Last Updated: March 5, 2021
Note: This custom code is offered with no support from Pendo Customer Support.
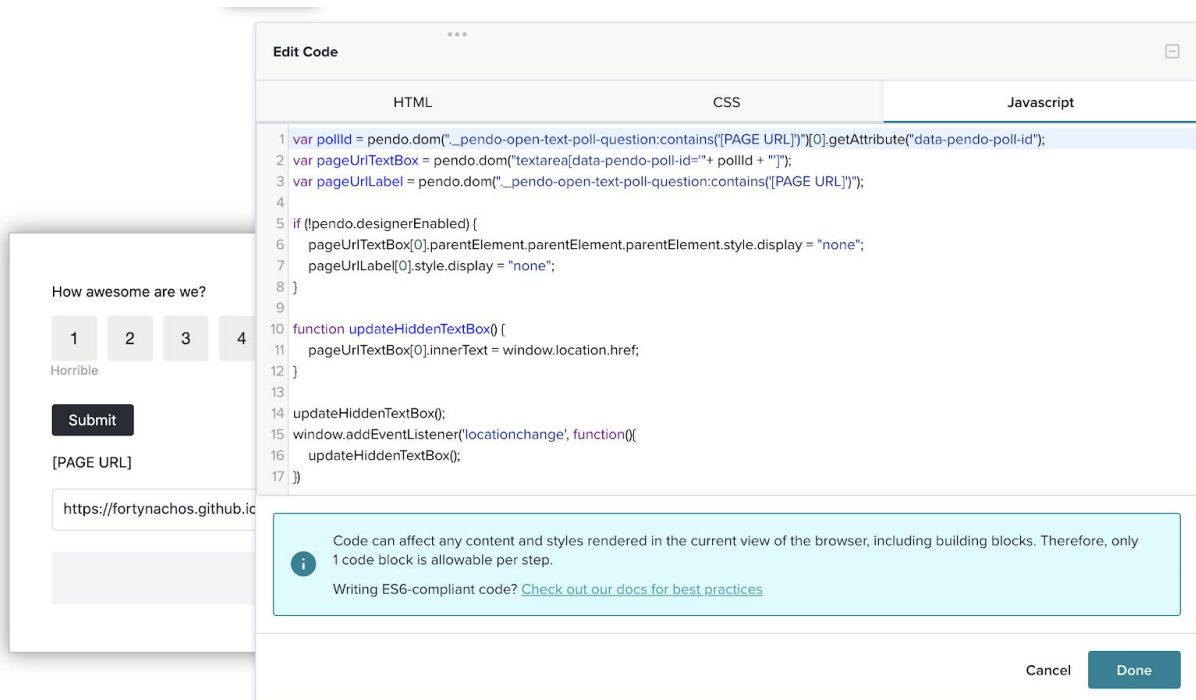

Step 1: Create a new guide that contains any of your desired poll questions, along with an additional open text poll question that will be used for capturing the page's URL. The question corresponding to the open text poll **must** contain the text string "[PAGE URL]".

Step 2: Enter this code into the JavaScript tab within a new custom code building block.

Note that the hidden box will disappear from view during a preview or once the guide is published. In the designer, it will remain visible for easy editing. Once this step is complete, save your guide.

Step 3: Preview your guide normally. To test the functionality, you'll need to push the guide to staging, (or public, segmented to just your visitorID or a small set of visitorIDs). Results should appear in Pendo within an hour.
